MS **Artificial Intelligence** Graduate at **LUMS** and experienced **Software Engineer** specializing in scalable backend systems. Proficient in **C#**, **Python**, and **Artificial Intelligence**, with a professional background in **ERP** architecture and a deep technical interest in **Generative AI**, **Kinematics**, and **Robotics**.

EDUCATION

Lahore University of Management Sciences (LUMS) *September 2024 - May 2026*

MS Artificial Intelligence

***Projects**:*

- *Wakeel-LLM* – Built the RAG retrieval pipeline for a bilingual Urdu/English Pakistan Family Law assistant to make legal information accessible to users without a lawyer
- *Data Engineering Pipeline of Cricket Dataset* – Built the data engineering pipeline using Python, transforming raw match data into a clean, structured SQLite dataset used to train an XGBoost prediction model and power a Streamlit interface
- *Image Captioning Analysis and insights* – Built an interactive Streamlit dashboard analyzing 8,092 images and captions from the Flickr8k dataset using Dask, surfacing sentiment, theme, and word-frequency insights across the dataset
- *Farm Management AI (Farm AI – MS Project) tool* – Built a full-stack precision agriculture platform fusing Sentinel-2 satellite imagery and IoT sensor data to train irrigation, yield, and microclimate prediction models, achieving 82–89% accuracy on irrigation classification

***Relevant Courses**: Artificial Intelligence | Machine Learning | Mathematics in AI | Data Engineering | Data Science | Large Language Models | Mobile Robotics | Deep Vision Language Models.*

Karachi Institute of Economics & Technology (KIET) *August 2019 - January 2024*

BS Enterprise Resource Planning

***Projects**:*

- *Final Year Project (BS)* – Built a full-stack ERP web application (ASP.NET Core, C#) covering sales orders, purchase orders, inventory transfers, vendors, and accounting, with a Java mobile app for reporting

***Relevant Courses**: Databases | Object Oriented Programming | Machine Learning | Business Intelligence | Business Process Management | Web Development | Mobile App Development | Programming Fundamentals | Software Engineering | Data Science.*

PROFESSIONAL EXPERIENCE

Infinitrs – *Software Engineer* *November 2023 – Present*

- Built 20+ custom backend modules in Python within an enterprise ERP framework, implementing business logic and database schemas with LTS compatibility considerations, automating business process pipelines by 40% and improving decision making time by 30%
- Engineered 30+ automated reporting pipelines (PDF generation) translating raw database queries into structured business insights reducing report interpretability time by 60%
- Worked directly with clients to gather requirements and design scalable backend solutions

Affinity Business Suite – *Software Engineer* *January 2023 – October 2023*

- Developed 10+ backend modules and automated reporting pipelines, maintaining clean, scalable Python codebases automating business process pipelines by 55%
- Integrated on-premise systems with AWS RDS, migrating manual data access workflows to a secure, remotely accessible cloud database
- Configured SSL/NGINX for production deployments, enforcing encrypted traffic and improving content delivery speed by 35%
- Collaborated with senior engineers on system integrations for real-time business reporting

CERTIFICATIONS

- SQL (HackerRank)
- Python Basic (HackerRank)
- Cloud: AWS & Azure Fundamentals (Datacamp)

SKILLS

Languages: C# | Python | JavaScript | Java | HTML | CSS | SQL.
Frameworks: Azure Functions | ASP.NET (C#) | Odoo Framework (Python) | Fast API | Django.
Developer Tools: Git | Visual Studio | VS Code | PyCharm | Postman | MySQL Workbench | pgAdmin | Azure.
Libraries: NumPy | Flask | Scikit-learn | Tensorflow | Psycopg2 | PySpark | Apache Hadoop | Apache Airflow | Kafka.
Soft Skills: Technical Documentation | Teamwork | Problem Solving | Communication | Leadership.
Industry Knowledge: Sales | HR | Finance | Inventory | Manufacturing | Software Engineering
